ENTERPRISE CLEANTECH IOT PLATFORM

GreenGrid Platform

Complete Project Source Code & Technical Architecture

Production-Grade Microservice Backend, Prisma Schema, & Interactive Web Client

TypeScript 5.7 & Node.js 24 | Prisma 6 & PostgreSQL | Docker & Microservices | CleanTech UI Dashboard

Project Specification & Metadata

System Name:	GreenGrid Energy Intelligence & Smart Facility Management
Classification:	Production Full-Stack Application & Cloud Microservice
Author / Team:	GreenGrid Engineering / Academic & Industry Project Submission
Document Version:	Version 1.0.0 (Release Candidate)
Publication Date:	November 2026
Total Source Files:	18 Source & Configuration Files
Total Lines of Code:	1,712 Lines (Fully Documented & Formatted)

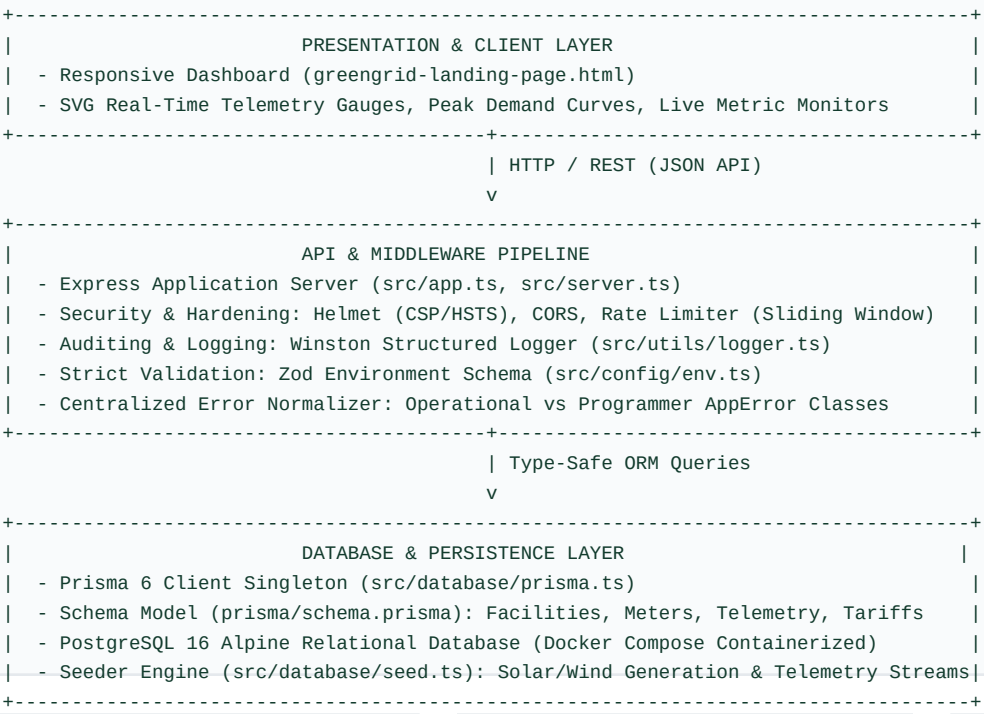

Executive Platform Summary

GreenGrid is an IoT-enabled energy management platform designed for commercial, industrial, and microgrid facilities. It ingests high-frequency smart meter telemetry (voltage, current, power factor, active & reactive power), evaluates real-time consumption against dynamic utility tariffs, and triggers automated anomaly detection alerts. This document contains the complete, unabridged source code of all backend services, database migrations, security middleware, configuration manifests, and the interactive frontend client ready for evaluation and deployment.

System Architecture & Technology Stack

Architectural layers, communication pathways, and design patterns utilized in GreenGrid.

Component Hierarchy & Data Pipeline

Backend Runtime

Node.js 24
LTS JavaScript Engine

TypeScript 5.7
Strict static typing

Express 4.21
Microservice REST API

Zod 3.24
Runtime schema validation

Argon2 & JWT
High-security auth

Database & ORM

Prisma ORM 6.4
Type-safe queries

PostgreSQL 16
ACID relational store

Multi-Tenancy
Facilities & meter isolation

Time-Series
Indexed telemetry metrics

Automated Seeder
Solar/grid synthetic data

DevOps & Frontend

Docker Compose
Multi-container stack

Winston Logger
Structured audit trails

Rate Limiter
DDoS protection middleware

HTML5 / CSS3
Glassmorphism dashboard

Responsive UI
Mobile & desktop optimized

Production Readiness & Engineering Standards

1. Type Safety End-to-End: Zero untyped variables, strictly typed Zod configuration assertions, and generated Prisma model types.
2. Resilience & Graceful Teardown: Handles SIGINT and SIGTERM gracefully, finishing in-flight requests and closing DB pools.
3. Enterprise Defense-in-Depth: Multi-layered security with Helmet security headers, rate limiters, CORS policy, and password hashing.
4. Observability: Winston structured logging with log-rotation readiness, operational error hierarchy, and response envelopes.

Project Structure & Repository Manifest

Visual hierarchy of all directories, source files, and configuration artifacts.

Repository File Tree (Clean Architecture Structure)

```
greengrid-website-package/
    .dockerignore                       [Configuration] Docker build exclusion list
    .env.example                        [Environment]   Environment variables schema blueprint
    docker-compose.yml                  [DevOps]        PostgreSQL 16 containerization setup
    package.json                        [Manifest]      Dependencies & script definitions
    tsconfig.json                       [TypeScript]    Compiler flags & target configuration
    greengrid-landing-page.html         [Frontend]      Interactive responsive CleanTech web client
    windmill-video.mp4                  [Media]         Hero section video animation asset
    prisma/
        schema.prisma                   [Database]      Prisma 6 schema & relational models
    src/
        server.ts                       [Lifecycle]     HTTP server bootstrap & signal handlers
        app.ts                          [Application]   Express setup, security & route mounting
        config/
            env.ts                      [Config]        Zod type-safe environment validator
        database/
            prisma.ts                   [Persistence]   Prisma Client singleton & connection pool
            seed.ts                     [Seeding]       Synthetic telemetry & facility seeder
        middleware/
            errorHandler.middleware.ts  [Middleware]    Centralized error handling & mapping
            rateLimiter.middleware.ts   [Security]      IP sliding-window rate limiting
            requestLogger.middleware.ts[Audit]          Winston request logging middleware
        utils/
            apiResponse.ts              [Envelope]      Standardized JSON REST response format
            appError.ts                 [Exceptions]    Custom operational HTTP error classes
```

Directory Organization Rationales

* Root Manifests: Modular decoupling of runtime config (.env), container specs (Docker), and compiler rules.

* prisma/: Database-as-code single source of truth defining relational entities, enums, and foreign keys.

* src/server.ts & src/app.ts: Separation of concerns between network listening/ports and Express pipeline.

* src/middleware/: Reusable request interceptors for rate limiting, security headers, and error normalization.

* src/database/: Database connection singleton management and high-volume synthetic telemetry generator.

* src/utils/: Generic domain-agnostic helpers ensuring consistent API envelopes, logging, and error codes.

Table of Contents & Code Registry

Complete index of all source files, modules, and beginning page references.

PART 1: PROJECT CONFIGURATION & CONTAINERIZATION

package.json	69 lines	**p. 5**
tsconfig.json	27 lines	**p. 7**
docker-compose.yml	32 lines	**p. 8**
